

Synthetic spouse and workplace collateral

Entirely synthetic input document for Clarity POC testing

Reporter	spouse and nurse unit manager
Setting	home and work
Source type	collateral_report

Spouse report

Before rotating shifts, RB was consistently organised with bills, appointments, and parenting tasks. Forgetfulness appears after poor sleep and improves over several rested days. The spouse has not observed lifelong impulsivity or restlessness.

Manager report

RB's historical performance was careful and reliable. Recent slowing and repeated checking cluster after night shifts. No pattern of lost equipment, missed handovers, disruptive activity, or impulsive behaviour is reported.

Strengths and risk

Both reporters describe RB as conscientious, compassionate, and receptive to feedback. Neither reports intoxication, unsafe impulsivity, or acute mental-health risk.
