

Fictional already-scored instrument summary

Entirely synthetic input document for Clarity POC testing

Reporter	patient and mother
Setting	home
Source type	instrument_export

Important notice

Fictional instruments and synthetic values for software testing only; no proprietary items are reproduced.

SAAP

Patient attention index T=73 and activity/impulse index T=69. Maternal retrospective attention index T=67 and activity/impulse index T=65. Supplied consistency indicators: acceptable.

SMCI

Current worry context index T=71; current depressive context index T=54. Supplied interpretation: anxiety is clinically relevant and should be integrated without assuming it explains the full developmental pattern.
