

Fictional already-scored instrument summary

Entirely synthetic input document for Clarity POC testing

Reporter	patient and partner
Setting	home
Source type	instrument_export

Important notice

These are fictional instruments and synthetic values created only for application testing. No proprietary questions are reproduced and no score should be used clinically.

SAAP - patient

Attention/organisation index: T=72. Activity/impulse index: T=68. Response consistency: acceptable. Supplied interpretation: elevations are consistent with the reported concern but are not diagnostic.

SAAP - partner

Attention/organisation index: T=69. Activity/impulse index: T=63. Response consistency: acceptable. Supplied interpretation: cross-informant elevation is present.

SEFI - patient

Working organisation index: T=70. Task monitoring index: T=67. Supplied interpretation: executive-function concerns warrant integration with interview, history, collateral, and impairment evidence.
