

Fictional already-scored instrument summary

Entirely synthetic input document for Clarity POC testing

Reporter	patient and spouse
Setting	home
Source type	instrument_export

Important notice

Fictional scales and synthetic values for software testing only; no proprietary items or clinical scoring are included.

SAAP

Patient attention index T=64; spouse attention index T=52; activity/impulse indices T=47 and T=45. Supplied interpretation: limited cross-informant convergence and no developmental inference.

SASCS

Sleep disruption context index T=76 and worry context index T=70. Supplied interpretation: current concentration complaints strongly covary with sleep and worry; integrate with clinical history.
